Overall Rating Methodology

According to GWEB guidelines the following categories were used:

D: All parameters rated desirable or in-between

B: Parameter ratings were mixed

U: Most parameters rated undesirable

Land Use Categories

YT: Young forest trees. Can range from recently planted harvest units to stands with trees up to 15 cm dbh.

ST: Second growth timber. Trees 15-30 cm dbh in generally dense, rapidly growing, uniform stands.

LT: Large timber (30-50 cm dbh).

TH: Timber harvest. Active timber management including tree felling, logging, etc. Not yet replanted.

MT: Mature timber (50-90 cm dbh)

AG: Agricultural crop or dairy land

LG: Light grazing pressure. Grasses forbs and shrubs present, banks not broken down, animal presence obvious only at limited points such as water crossings. Cow pies present.

HG: Heavy grazing pressure. Broken banks, well established cow paths. Primarily bare earth or early successional stages of grasses or forbs present.

RR: Rural residential

Conclusions:

* 46% of surveyed reaches are in the ST Landuse category

* 17% of surveyed reaches are in the YT Landuse category

* 15% of surveyed reaches are in the LT Landuse category

* 82% of surveyed reaches have in-between pool conditions

* Complex pools (pools with wood complexity) were low -- conditions were undesirable in 85% of reaches surveyed.

* Surveyed streams with more than one reach having undesirable conditions were: Osweg Creek, Trailover Creek, Wolf Creek and Moores Creek
