## Composite Solid

### Designing a Constructivist Industrial Solid

**Develop your design sketch from X02 into a physical form using one of each type of material [volumetric / planar / linear]. Secondly, pencil render the form axonometrically with shadows on 18"x24" watercolor paper.**

Analyze the form that you designed in relation to both the desired material sensibility that you intuited and the physical characteristics of the material that you have experienced. Max size 8"x8"x10", rectangular form should not be perceived.
