

A Database for Area Wide IPM

(integrated pest management)

in Berry Crops

Beth Robinson and Allegra Rainbow

Berries in the PNW

Oregon:

- Third major producer of U.S. blueberries. (February 2000)
- Number one producer of U.S. blackberries, Boysenberries and Loganberries. (August 2002)
- Second in U.S. raspberry production. (August 2002)
- Third in U.S. strawberry production. (July 2002)
- Accounts for all of U.S. black raspberry market. (Sept. 7, 1999)
- Accounts for 26.1% of U.S. red raspberries. (Sept. 7, 1999)

Washington:

- Produces 59% of the raspberries grown in the U.S. (January 1999)
- Produces over 10% of raspberries grown worldwide. (January 1999)

Information from Western Region IPM Crop Profiles

IPM

- IPM: process that identifies and reduces risks from pests and pest management related strategies.
- Coordinates the use of pest biology, environmental information, and available technology to prevent unacceptable levels of pest damage by the most economical means, while posing the least possible risk to people, property, resources, and the environment.

Photo source: www.pestmanagement.rutgers.edu/IPM/Vegetable/

WHAT IS IPM?

Farmers use **Integrated Pest Management (IPM)** strategies to prevent crop damage from insect, weed, and disease pests.

IPM PRACTICES INCLUDE:

WHY SHOULD YOU CARE?

Because IPM practices help farmers:

- conserve our environment
- produce quality crops
- maintain farm profitability

RUTGERS COOPERATIVE EXTENSION

NORTHEAST CENTER FOR RURAL DEVELOPMENT

What are our GIS Needs?

- A geodatabase to join spatial information to external data
- Grower and processor location maps
- Regional area maps
- Scouting grid maps
- Insect and disease location maps

Objectives

- Design a geodatabase that can easily produce and reproduce grower location maps and scouting grid maps
- Increase workflow by creating templates and annotation for displaying maps on two media types- paper and the Internet.
- Integrate information from an Access-based software program into the GIS.
- Establish a geodatabase application for displaying and analyzing insect and disease counts.

Difficulties

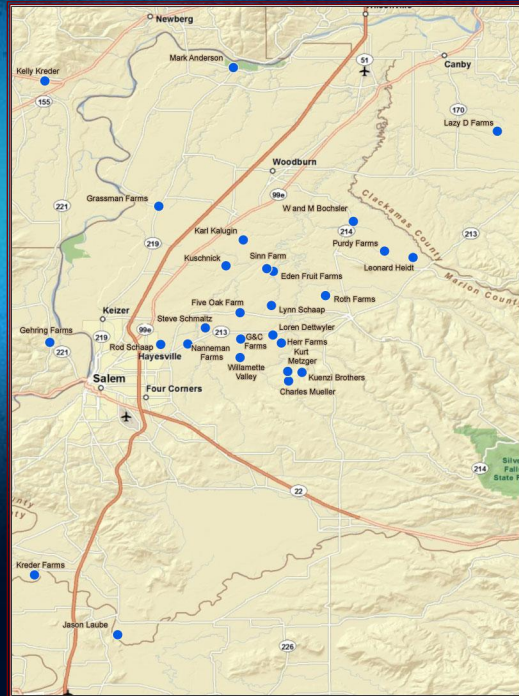

- Maps are easy- analysis is difficult
- Field data is in an external database
- Field data is based on grid locations, not GPS coordinates

Methods

(GIS Need: create processor and grower location maps)

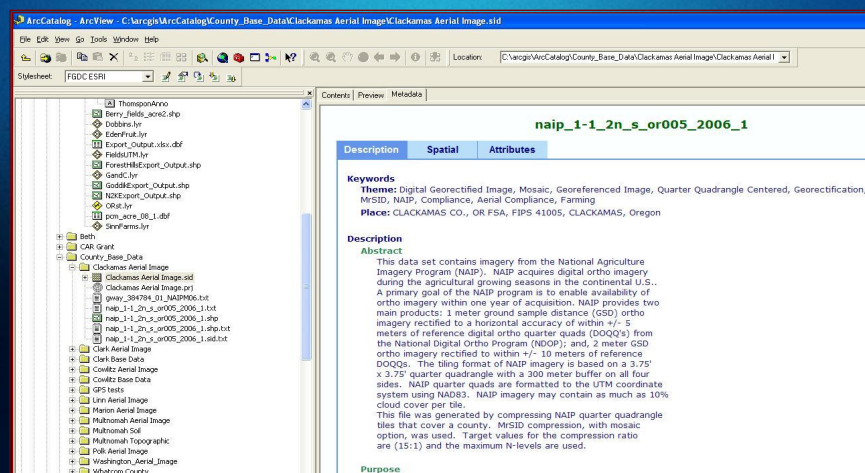

Geocode grower locations

Methods

(base layers for field and regional maps)

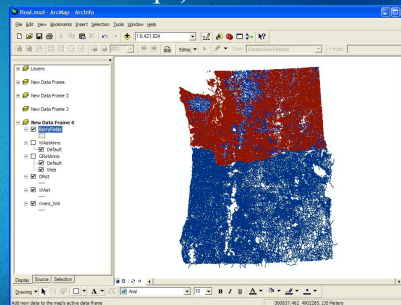

- Clip base layers to OR and WA extent
- Imagery comes from NAIP

Methods

(to create scouting grid and field maps)

- Create the fields featureclass

Grids and Graticules Wizard

Which do you want to create?

- ☒ Graticule: divides map by meridians and parallels
- ☐ Measured Grid: divides map into a grid of map units
- ☐ Reference Grid: divides map into a grid for indexing

[Add or Edit](#)

Comments

Vole/rodent activity was reported but at moderate levels throughout the field.

Pseudomonas symptoms were reported but at moderate levels.

No Shock virus symptoms are reported.

No winter moth or leafroller bud feeding was found.

No other insect problems or disease symptoms were found.

Recommendations

- Grower should evaluate vole/rodent activity to determine if management actions are needed.

General blueberry recommendations:

- Use Serenade for pseudomonas prevention as long as night temperatures are dropping into the mid thirties.
- Bring in bee at 10-15% bloom.
- Recommend a Pristine application at 10% bloom. Serenade can be tank mixed with this if needed.

Scout Field Note

Partly sunny & warming.

	Aphids Parasitized:	0	0	0	0	0	0

Site	Coord	Field Notes
1	E9 Edit	rabbits, one irrigation hose has been chewed through, nothing very notable here, good vigor, found a Mayfly
2	G7 Edit	some twigs with white tips, voles present
3	F5 Edit	one plant being choked by grass. Not much to report here
4	G3 Edit	a few random dead buds
5	G1 Edit	few rabbits here. Some shock (one bush), one bush with curling/wilted tips & dying buds. Pseudomonas affecting some buds.

Orange Tortrix Application

Can we use our geodatabase structure to import and display orange tortrix counts from a single scouting event into the GIS?

Errors and Obstacles

- The Stan database had to be downloaded.
- The fishnet tool inaccurate if not careful.
- The grid coordinates are sufficient for data collection, but not trend analysis.

50 Yards Peerbolt Crop Management ~ Portland, Oregon ~ (503) 289-7287 ~ www.pembolt.com

Acreage	Grower	Field Name	Crop	Field Code

Future applications

- Make insect and disease trends visible to decision makers via web based mapping
- Import GPS coordinates to the GIS desktop to link to the STAN in the future.
- One day, trend analysis ☺
