

ArcToolBox: Data Management

Toolsets

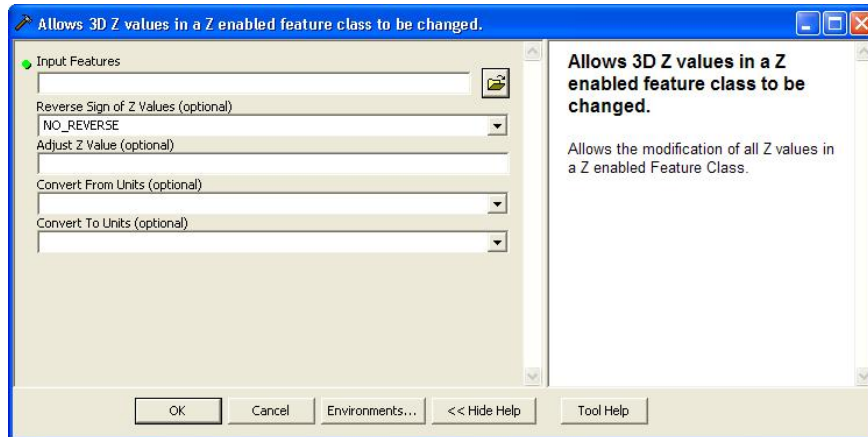

- Features
- Generalization

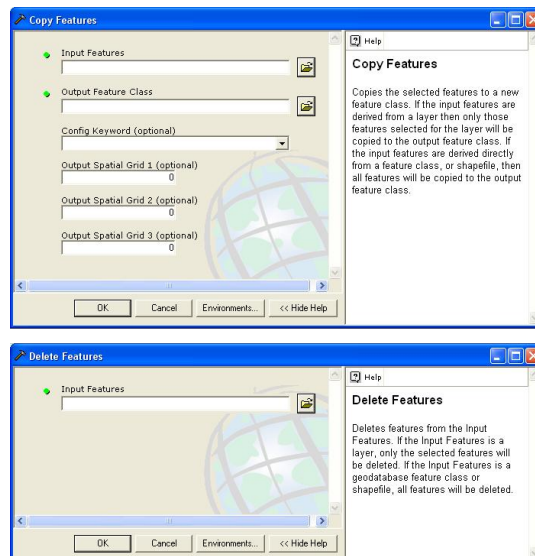

Features – Add XY Coordinates

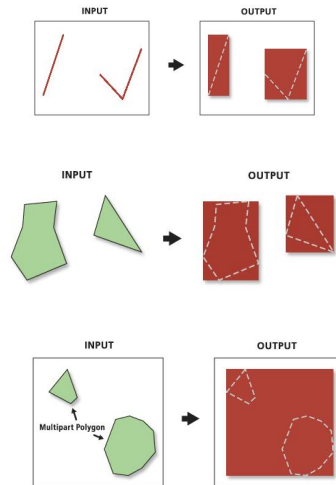

Features – Adjust 3D Z

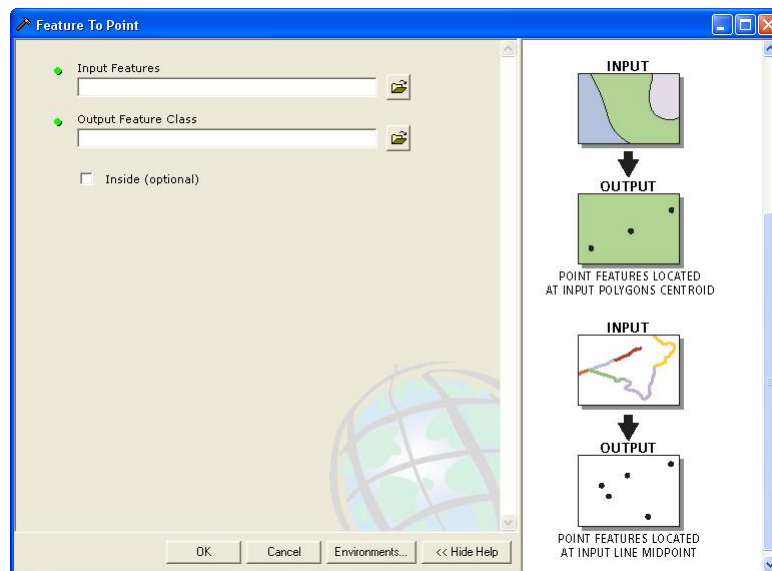

Features – Copy/Delete Features

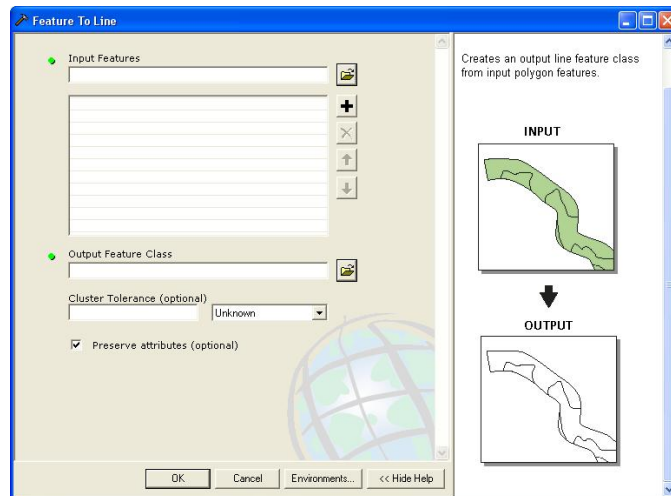

Features – Feature Envelope to Polygon

Features – Feature to Point

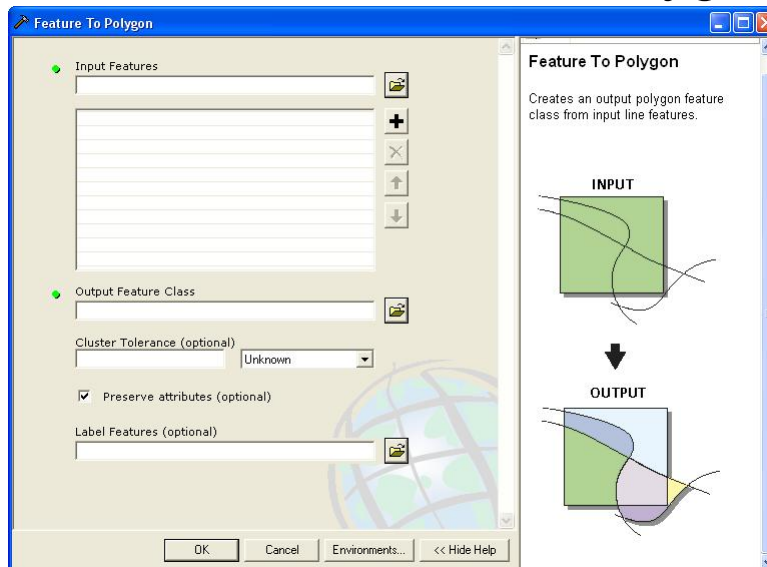

Features – Feature to Line

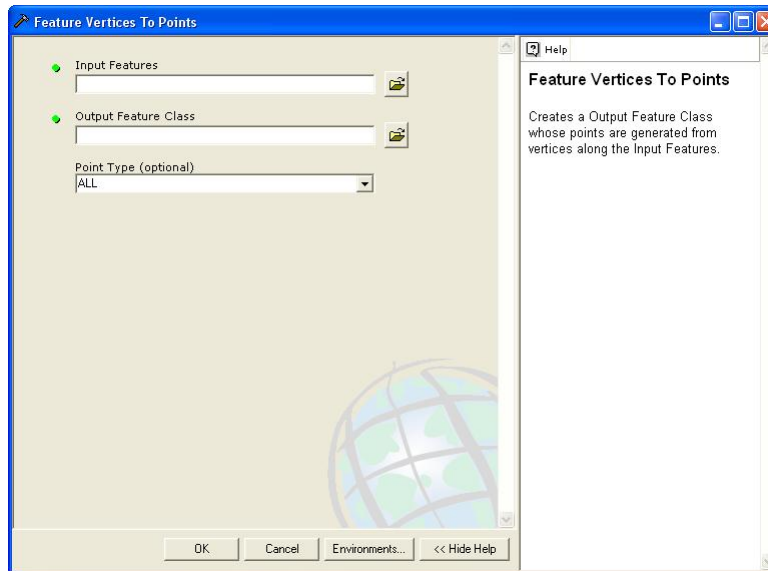

- Input must be polygon features

Features – Feature to Polygon

Features – Feature Vertices to Points

Features – Multipart to Singlepart

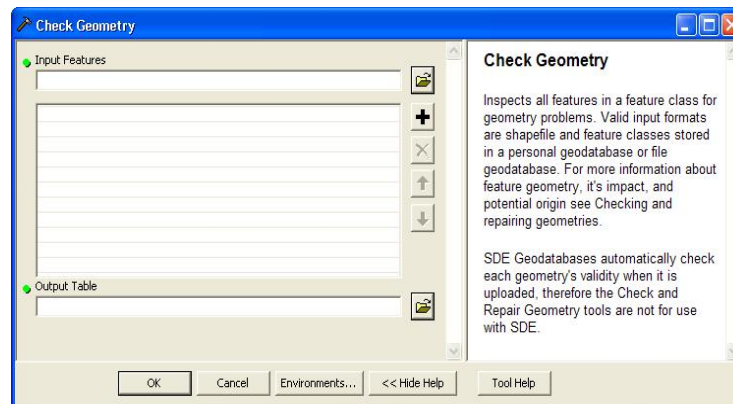

Features – Polygon to Line

Features – Check/Repair Geometry

- Valid Input formats:
 - Shapefiles
 - Personal & File GDB
- SDE GDB check geometry automatically

Geometry Problems

- Short segment: Segments are shorter than allowed by the system units of the spatial reference.
- Null geometry: The feature has no geometry or nothing in the SHAPE field.
- Incorrect ring ordering: The polygon's rings may not be oriented correctly (outer rings - clockwise, inner rings - counterclockwise).
- Incorrect segment orientation: Segments are not consistently oriented. The "to" point of seg i should be incident on the "from" point of seg i+1.
- Self intersections—The interior of each part must not intersect itself or other parts.
- Unclosed rings—The last segment in a ring must have its "to" point incident on the "from" point of the first segment.
- Empty parts—The geometry has multiple parts, and one of them has no geometry.

Output Table of Check Geometry

- CLASS
- FEATURE_ID
- PROBLEM

PROBLEM	Point	Line	Polygon
short segment		✓	✓
null geometry	✓	✓	✓
incorrect ring ordering			✓
incorrect segment orientation			✓
self intersections		Multipart	Multipart
unclosed rings			✓
empty parts	Multipart	Multipart	Multipart

Features – Repair Geometry

Features – Split Line at Vertices

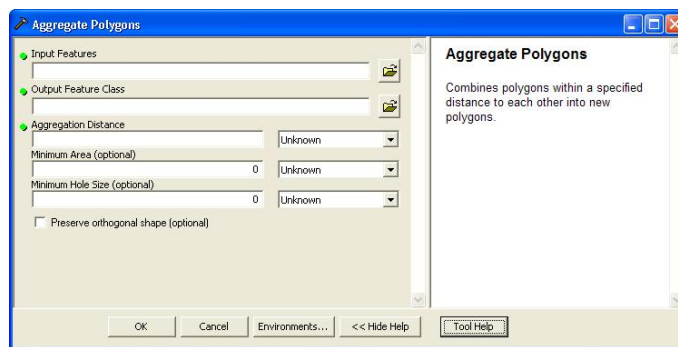

Generalization – Aggregate Polygons

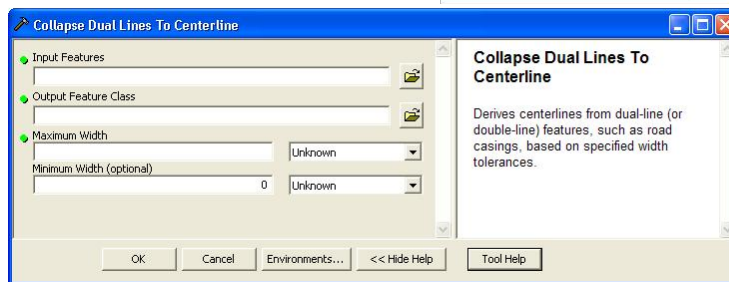

A) Nonorthogonal features

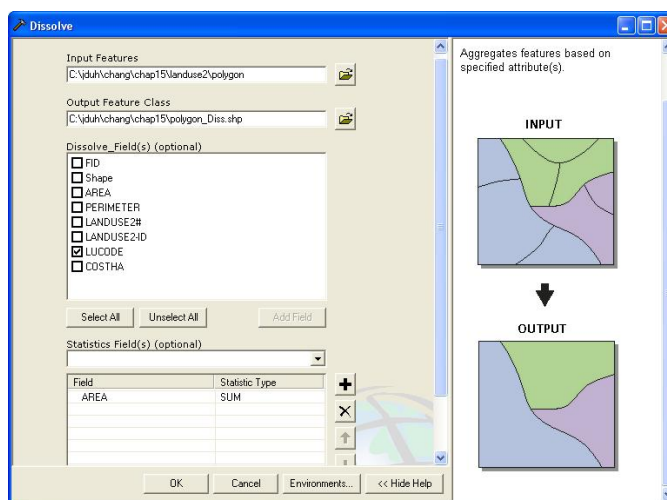

B) Orthogonal features

Generalization – Collapse Dual Lines to Centerlines

Generalization – Dissolve

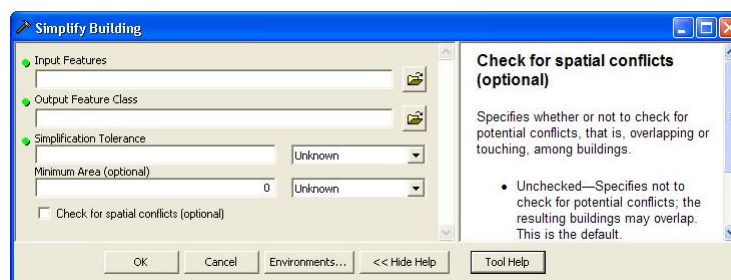

- Dissolve may result in multipart features being created

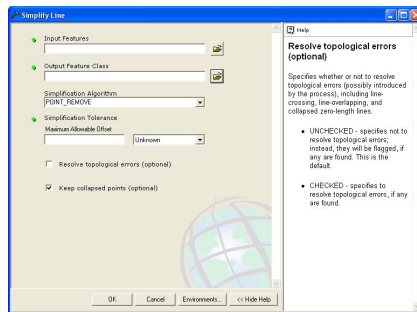

Generalization – Eliminate

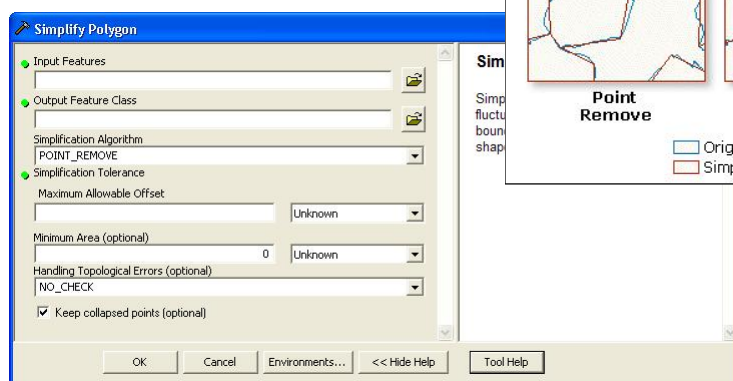

Generalization – Simplify Building

Generalization – Simplify Line

Generalization – Simplify Polygon

Generalization – Smooth Line/Polygon
