

FRONTIER™ PRO

MULTI-USE WATER FILTER SYSTEM

Use the Frontier Pro filter to filter water directly from any water bottle, cup, hydration system or directly from any water source. The Frontier Pro filter is tested and certified* to remove >99.9% of Giardia and Cryptosporidium. Activated Coconut Shell Carbon reduces waterborne chemicals, improves taste and eliminates offensive odors. Miraguard™ antimicrobial technology suppresses the growth of bacteria, algae, fungus, mold and mildew within the filter media.

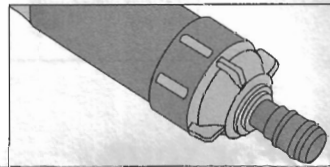

- Simply attach filter to water container.
- Pull on cap strap and position the cap to the side of the filter.
- Bite on valve and suck water through the filter.

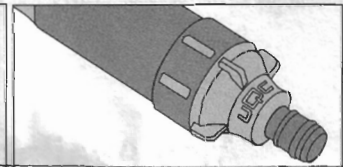

UQC

UNIVERSAL QUICK CONNECT

No more need to cut tubing to attach the Frontier Pro to your hydration system. Simply replace the standard 28mm pre-filter adapter with the UQC pre-filter adapter (included) to connect your Frontier Pro with quick connect tube fittings directly to Camelbak®, Nalgene®, and Source® hydration systems.

This configuration (without UQC spacer) connects to Camelbak® hydration systems.

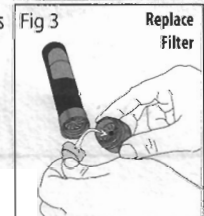

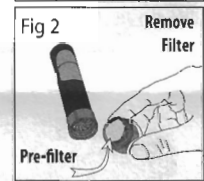

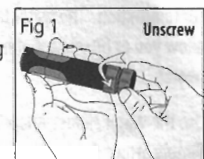

This configuration (with UQC spacer) connects to Nalgene® & Source® hydration systems.

Initial Use:

On initial use, pinch the bite valve and force water through the filter until the water stream is clear. This will clear out any loose, harmless carbon dust. Flow rates may be slightly reduced and suction a little difficult. Flow rates will improve as the filter media becomes thoroughly wetted.

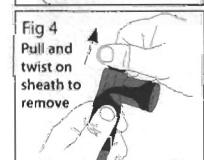

To Remove/Replace Pre-Filter Disk:

- 1) Screw off pre-filter adapter from the base of the filter casing (Fig 1).
- 2) Pull the pre-filter disk out of the adapter (Fig 2).
- 3) Place a new pre-filter disk into the adapter (Fig 3).
- 4) Screw the pre-filter adapter snugly into the base of the filter casing.

To Remove/Replace Bite Valve:

- 1) While holding the filter with one hand, grab the base of the bite valve with your other hand. Twist and pull the valve straight off. (Fig. 4)
- 2) To replace Bite Me™ Valve, press the core insert into the boss until it bottoms out on the rim of the boss.
- 3) Wet the inside surface of the sheath and press it over the insert and boss until it bottoms out at the base of the boss.
- 4) Position the sealing rim of the sheath so that the "button" protrudes slightly above the rim of the sheath. (Fig. 5)

To Connect to Hydration Systems Using the UQC Pre-Filter Adapter:

- 1) Insert pre-filter disk into the UQC Adapter. (Fig. 6)
- 2) Screw the pre-filter adapter snugly into the base of the filter casing.
- 3) To connect to Camelbak® HydroLink™ connectors remove

the UQC spacer and push the end into the HydroLink™ until you feel and hear it "click" in place. Press the button and pull to remove. (Fig. 7)

- 4) To connect to Nalgene® or Source® connectors install the UQC spacer and push the end into the connector until you feel and hear it "click" in place. Press the button and pull to remove. (Fig. 8)

To Set up a Gravity Flow System:

- 1) Remove the bite valve.
- 2) Attach Frontier Pro to tube.
- 3) Hang the reservoir with the filter at the lowest point and allow gravity to force water through the filter. (Fig. 9)
- 4) Increased distance between the reservoir and the filter will improve flow rate.

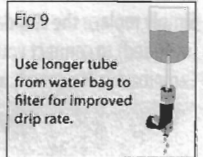

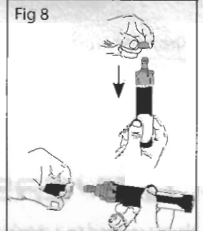

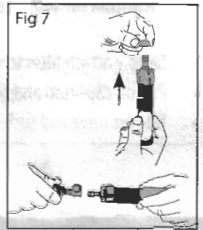

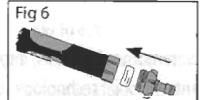

To store filter for extended periods:

- 1) Remove and discard the pre-filter disk.
- 2) Remove cap and bite valve sheath
- 3) Allow to air dry at room temp. (Min. 48 hours)
- 4) Insert a new pre-filter disk prior to next use.

* This filter is not certified to remove bacteria or viruses. For maximum protection, use the Frontier Pro in conjunction with **Aquamira Water Treatment or Aquamira Water Purifier Tablets.**

DO NOT FREEZE. Freezing a wetted filter may damage the filter media and compromise filter integrity.

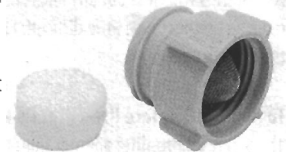

Fig 5 Position sheath so that the button is visible as shown.

Also Available For Your FRONTIER™ PRO

The New WATER HEATER ADAPTER

This ingenious device will turn your Frontier Pro Water Filter into a water heater filter. In an emergency most homes have water available in the water heater. The problem is getting the water out without contamination. The water heater attachment will allow you to filter the water as it exits your water heater.

Use the Water Heater Adapter to attach your Frontier Pro to any garden faucet as well. Simply attach the filter, remove the bite valve, and turn on the faucet to provide safe, clean, filtered water from any garden hose bib.
