

Energy Efficiency: Lower cost/
more efficient air conditioner
in a hot climate ✓

Rebound → More use →
→ bad for the health of the family
→ bad for environment

- 1) A community is an "organic machine" always changing with its various systems, interacting - so you can introduce "water drip" (like your example) but this may depend on many other factors within the community in order to raise itself out of the Poverty Trap
- 2) better infrastructure → cleaner water
better roads → more access to education
→ more community pride → healthier living
more prosperous town

Example of energy efficiency is ~~the~~ fuel
new ~~small~~ efficient cars and
trucks.

Rebound: Many people will ~~also~~ start
to buy new truck and use gas
even more.
