

## *MODEL almost ANY DATA!*

### SySc 551/651: **DISCRETE MULTIVARIATE MODELING**

In this course, information theory is used as a framework for modeling and data mining: for analyzing static or dynamic relations among discrete\* variables, for detecting complex interaction effects, and for discovering nonlinearities in continuous variables made discrete by binning.

In the systems literature, these information-theoretic and related set-theoretic methods, used together with graph theory techniques, are called “Reconstructability Analysis” (RA). RA overlaps with and extends log-linear modeling in the social sciences, Bayesian networks and graphical models in machine learning, decomposition techniques in multi-valued logic design, Fourier methods for compression, and other modeling approaches. It can be used for confirmatory and exploratory statistical modeling as well as for non-statistical applications.

Because of their applicability to both qualitative and quantitative variables, RA methods are very general. They are usable in the natural sciences, social sciences, engineering, business, and other professional fields. The ideas of RA define “structure,” “complexity,” “holism,” and other basic notions, and are foundational for systems science. For course-related research and publications, see <http://www.pdx.edu/sysc/research-discrete-multivariate-modeling>.

This is the theory course that goes with the project course, SySc 431/531 **Data Mining with Information Theory**, next offered in Winter 2022. It is also the theory course for the **Occam software**, recently been made open source; see <https://www.occam-ra.io/>

\*Discrete variables are typically nominal (categorical, symbolic), but may be ordinal or integer.

Prerequisites: Background in probability/statistics. SySc511 is helpful but not essential.

Texts (at the PSU bookstore):

1. Krippendorff, Klaus (K). *Information Theory: Structural Models for Qualitative Data*. Series: Quantitative Applications in the Social Sciences, Paper # 62, Sage Publications, Beverly Hills, California, 1986. (ISBN 0-8039-2132-2, paperback) *Main* text for course.
2. Knoke, David and Burke, Peter J. (K & B). *Log-Linear Models*. Series: Quantitative Applications in the Social Sciences, paper # 20. Sage Publications, Beverly Hills, California, 1980. (ISBN 0-8039-1492-X, paperback) *Secondary* text for course.

Grades will be based on midterm and final exams and a micro-project.\*

\*If any aspect of this course presents a barrier to your learning, please notify me.

Outline ([ ] = optional or skim)

March 29	Course overview <i>Zwick (Overview) [Wholes &amp; Parts] [Introduction to RA]</i>
March 31 April 5, 7	<b>I Basic concepts</b> (information-theoretic): static/dynamic multivariate relations in categorical data; uncertainty, transmission; <i>K: 1-32</i>
April 12	<b>I Basic concepts: exercises</b>
April 14, 19	<b>II Structures</b> (graph theoretic); degrees of freedom <i>K: 32-43, 47-53 [70-81]; K&amp;B: 36-37</i>
April 21	<b>III Information-theoretic reconstruction</b> (Putting I & II together) Generalized transmission, information distance; uncertainty maximization; iterative proportional fitting <i>K: 43-62, 66-67, 70-88; K&amp;B: 30-34, 38-42 [Zwick (CU, RAE)]</i>
April 26	<b>II Structures: exercises</b>
April 28	<b>MIDTERM EXAM</b> on TOPICS I & II only
May 3	Over midterm exam
May 5, 10	<b>III Information-theoretic reconstruction</b> , statistical issues
May 12	<b>III Information-theoretic reconstruction: exercises</b>
May 17	<b>IV OCCAM software</b> <i>Willett &amp; Zwick; Fusion, Willet &amp; Zwick; Kramer et al</i>
May 19, 24	<b>V Supplementary topics:</b> binning, masks <i>Zwick, Shu, &amp; Koch,</i> state-based RA <i>Johnson &amp; Zwick, Zwick &amp; Johnson, Zwick (O_II.2)</i> set-theoretic RA <i>Zwick (CU_4), Zwick &amp; Shu; Zwick (O_II.3)</i> log-linear modeling <i>K&amp;B: 5-29, 42-63</i> reconstruction vs. identification
May 26	<b>V. Supplementary topics: exercises</b>
May 31	UNIVERSITY HOLIDAY
June 2	<b>General review; MICRO-PROJECTS DUE</b>
June 7	<b>FINAL EXAM:</b> will cover material from <u>entire</u> course.

To be distributed in class or available on web/D2L:
